DIGITAL ERA

PENETRATION TESTING AS A SERVICE (PENTESTAAS)

Traditional pentesting delivers value, but it's often too infrequent, too static, and too disconnected from your evolving risk.

Our Pentesting-as-a-Service (PTaaS) combines expert-led testing with an ongoing delivery model that adapts to your business needs. From new deployments to periodic risk validation, we offer consistent visibility into your attack surface—without the wait or disruption of once-a-year testing.

Continuous Testing. Real Insights. Actionable Outcomes.

We move beyond point-in-time assessments with:

Continuous Testing Engagements:
Scheduled or on-demand testing aligned to infrastructure, development, or compliance cycles.

Targeted Testing Across Assets:
Evaluate web applications, internal/external infrastructure, wireless networks, and cloud workloads using proven tactics and modern attack simulations.

Expert Analysis & Validation:
AI-based findings are reviewed and confirmed by senior analysts—no auto-generated output. You receive meaningful insights, not raw scan results.

Remediation Support & Retesting:
Get clarity on how to fix issues through remediation guidance, followed by optional retesting to validate risk reduction at no additional cost.

Security Maturity Insight:
Measure risk reduction over time with insights for leadership and auditors.

WHY CHOOSE US?

Hands-On Expertise:
Our AI-based services has been trained with real-world red teaming and security operations experience along with experienced humans to assist and confirm during the process.

Strategic Integration:
We work closely with your security, dev, and IT teams, so testing is embedded into your operations, not bolted on.

Flexible Service Models:
Choose continuous, scheduled, or milestone-based testing based on your environment, company size and objectives.

Clear, Validated Reporting:
All findings are manually verified and delivered with business context—supporting both technical and executive audiences.

OUTCOMES YOU CAN EXPECT

- More frequent and flexible validation of your security posture
- Detailed visibility into exploitable vulnerabilities and real-world exposure
- Faster remediation cycles with hands-on support
- Testing that keeps pace with IT and development teams
- Improved alignment with compliance and internal risk frameworks

EMPOWERING YOUR SECURITY OPERATIONS

- ☑ Validated vulnerability findings with severity and exploitability ratings
- ☑ Technical and executive-level reports with remediation priorities
- ☑ Optional retesting to confirm closure and track risk over time (Unlimited, included)
- ☑ Target coverage across infrastructure, applications, cloud, and wireless
- ☑ Dedicated technical team for context and continuity
