

DARK WEB MONITORING

Continuous scanning of dark web marketplaces, forums and breach dumps.

Credentials, emails and sensitive business data don't always leak in plain sight. They surface quietly on dark web forums and marketplaces. We scan continuously for exposed assets tied to your brand, people or infrastructure, and analysts validate every alert.

COMPROMISED DATA DOESN'T KNOCK FIRST.

What: the verified finding

A compromised email and password combination for a specific employee, for example.

Where: source context

Where it surfaced, such as a high-credibility forum with a large user base.

Why: risk relevance

Why it matters, such as a reused credential tied to internal VPN access.

Next: guided action

What to do now: password reset guidance, a policy trigger or endpoint verification steps.

WHY DIGITALERA

Human-verified alerts

Every alert reviewed by an analyst before it reaches you.

Custom scanning profiles

Built around your domains, VIPs and keywords.

3 tiers by scope

Core credential visibility up to full brand and executive protection.

Fits your stack

Enterprise tier integrates with SIEM, MDR and IR retainer.

WHAT YOU CAN EXPECT

- Know if credentials have leaked before they're used
- Verified findings in place of raw data dumps
- Brand impersonation and spoofed domains spotted early
- Documented exposure for insurers, auditors and counsel
- Findings that trigger resets, MFA and access review

WHAT YOU RECEIVE

- ✓ Verified breach alerts
- ✓ What, where, why, next detail
- ✓ Guided mitigation steps
- ✓ Scanning profile for your assets

Getting started

Monitoring starts from your domains, brands and key executives. No credentials, no network access and no agents.

Right fit if you need to know whether employee or executive credentials have already leaked.

Something else first if you need to test whether internal systems can be breached (Penetration Testing) or you have a confirmed breach (call the emergency line).
