

MANAGED CLOUD

Virtualization, Azure, identity and backup: 4 pillars, one relationship.

Cloud complexity is growing, and so are the risks of misconfiguration, cost sprawl and performance gaps. We simplify and secure operations across virtual infrastructure, Azure and productivity platforms, with full visibility and expert-led management.

CLOUD CONFIDENCE. EXPERT-MANAGED.

WHY DIGITALERA

4 pillars, 1 relationship

Virtualization, Azure, identity and backup together.

Certified engineers

Azure Solutions Architect Expert and CCSP certifications.

Cost and sprawl control

Governance built in, with usage analysis for better ROI.

Repeatable framework

Plan, test, patch, validate, on every environment.

WHAT YOU CAN EXPECT

- Unified governance across Azure and virtualized workloads
- Cloud cost aligned to actual usage
- Microsoft 365 identity and productivity under management
- Backups tested with real recovery drills
- Clear scope between cloud and on-prem services

WHAT YOU RECEIVE

- ✓ Governance & cost reporting
- ✓ Optimization & usage analysis
- ✓ Backup test & recovery results
- ✓ Compliance-aligned reporting

Which service fits

Pick this for cloud-first or hybrid Azure workloads. A purely on-prem virtual estate fits Managed Endpoint and Server.

Right fit if you run Azure, virtualized on-prem workloads or both, and lack unified governance across them.

Something else first if your virtualization is purely on-prem (Managed Endpoint and Server) or your priority is the physical network (Managed Networking).
