DIGITAL ERA

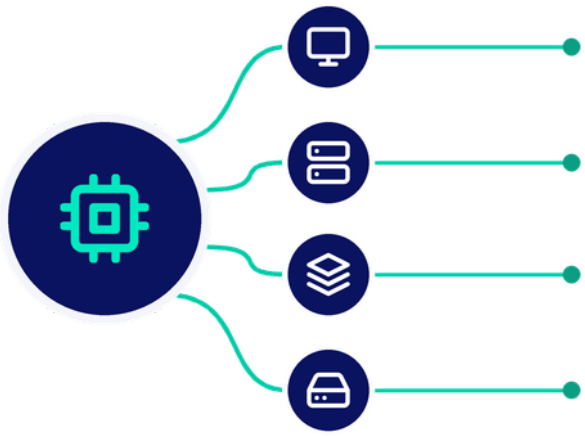
MANAGED SERVICES · CONTINUITY PILLAR **MANAGED IT**

MANAGED ENDPOINT AND SERVER INFRASTRUCTURE

Devices, core servers and virtualization: one team, one standard.

From user devices to core servers and virtual environments, your infrastructure is only as strong as its weakest node. We provide visibility, consistency and expert support for the systems that keep operations moving, so your team can focus on strategy.

ENDPOINTS. SERVERS. MANAGED WITH DISCIPLINE.



Endpoint management
Centralized monitoring across laptops, desktops and mobile devices, with standardized policies and rapid remote support.

Server management
Physical Windows and Linux server coverage, essential enterprise services kept stable, and priority support for critical workloads.

On-prem virtualization
Hypervisor health, VM lifecycle support and capacity planning that supports uptime and performance.

Patch and backup, everywhere
Structured patching and reliable backups applied consistently across every endpoint, server and VM.

WHY DIGITALERA

One team, one standard
Consistent configuration and policies across all systems.

Certified engineers
Azure Solutions Architect and ITIL 4 certifications.

Real-time response
Monitoring plus remote resolution to reduce downtime.

Audit-ready reporting
Documented patching, backup and infrastructure reporting.

WHAT YOU CAN EXPECT

- Visibility across devices, servers and virtualization
- Consistent, hardened configuration baselines
- Patch and backup discipline on every system
- Less operational overhead from routine maintenance
- Support that fits on-premises and remote teams

WHAT YOU RECEIVE

- Monitoring & event response
- Patch & backup management
- Lifecycle documentation
- Compliance-ready reporting

Where it fits
Works for on-prem and remote fleets. For a cloud-first or Azure-based environment, Managed Cloud is the better fit.

Right fit if your fleet, servers or virtualization lack central monitoring, and patch and backup discipline is inconsistent.

Something else first if your concern is the network layer (Managed Networking) or Azure and Microsoft 365 (Managed Cloud).
