

SIEM AS A SERVICE

Log aggregation, correlation and response, run by analysts, backed by software.

No hardware, no internal SOC buildout. Advanced analytics, real-time monitoring and actionable response, managed by seasoned SOC analysts and tailored to your environment, with every alert reviewed by a security engineer.

ENTERPRISE DETECTION. ZERO INFRASTRUCTURE.

Align: your priorities

Detection policies aligned to your business priorities and integrated with your stack before the service goes live.

Guide: response protocols

Your team is walked through response protocols step by step, with analysts acting as an extension of it.

Tune: continuously

Correlation rules, UEBA and threat intelligence tuned every week as new threats emerge.

Evolve: as you mature

Expands into MDR, XDR, compliance or advisory programs as your needs grow.

WHY DIGITALERA

Zero infrastructure

Cloud-native, with no hardware and no maintenance.

Experts on every alert

Security engineers with hands-on detection experience.

UEBA-enabled detection

Behavior analytics plus correlation rules and threat intel.

Compliance retention

Immutable logs aligned to HIPAA, PCI DSS and GDPR.

WHAT YOU CAN EXPECT

- Centralized log visibility across endpoints, cloud and SaaS
- Insider and compromised-account detection with UEBA
- Every alert reviewed by a certified security engineer
- Retention aligned to HIPAA, PCI DSS and GDPR
- Threat intel enrichment that improves signal over noise

WHAT YOU RECEIVE

- ✓ Prioritized escalations
- ✓ Response playbooks
- ✓ Remediation guidance
- ✓ Retention and audit reports

Getting started

Existing log sources are ingested as they are. We need log source access and sign-off on your retention requirements.

Right fit if you need centralized log visibility across endpoints, cloud and SaaS without building infrastructure.

Something else first if you need active containment on top of alerting (add MDR or XDR) or you're mid-incident (call the emergency line).

Talk to an expert
