

EXTENDED DETECTION AND RESPONSE

Endpoint, cloud, network, identity and email in one detection layer.

Modern attacks don't limit themselves to one system, and neither should your detection. We connect the dots across endpoints, cloud, network, email and identities with continuous monitoring, threat hunting and response, run by an experienced SOC.

INTEGRATED DEFENSE. REAL-TIME RESPONSE.

Correlate: cross-domain signal

Endpoint, cloud, identity and network signal layered together with threat intelligence and behavioral analytics for high-fidelity alerts.

Hunt: active threat hunting

AI models and human hunters work in parallel to catch privilege escalation and hidden malware before they escalate.

Respond: SOAR-based action

Isolation, access revocation or IP blocking, executed through SOAR automation and guided by analysts.

Prove: compliance and forensics

Audit-ready reporting aligned to NIST, PCI DSS, HIPAA and ISO 27001, with investigation support included.

WHY DIGITALERA

Certified SOC

Human analysts validate every alert and guide the response.

Works with your tools

Existing endpoint, cloud and identity tools stay in place.

Standalone or integrated

Run it alone or fold it into your MSSP relationship.

Scales by size

No fixed tiers, and no internal SOC buildout required.

WHAT YOU CAN EXPECT

- One correlated picture in place of 5 dashboards
- Detection across all 5 domains, correlated
- SOC-level operations without building a SOC
- Containment and enforcement, executed through SOAR
- Audit-ready reporting across every domain

WHAT YOU RECEIVE

- ✓ Audit-ready compliance reporting
- ✓ Threat hunting findings
- ✓ Investigation reports
- ✓ Framework-aligned evidence

Getting started

Existing tools stay in place. We need API or log access to each in-scope domain and a named contact for tuning.

Right fit if your attack surface spans endpoint, cloud, network and identity, and point tools don't talk to each other.

Something else first if your risk sits on endpoints and servers (MDR is the simpler start) or you're mid-incident (call the emergency line).

Talk to an expert
