

IT INFRASTRUCTURE PLATFORM IMPLEMENTATION

Deployment tuned to your environment, past vendor defaults.

SD-WAN, wireless controllers, network management and virtualization platforms ship with defaults built for a demo. We configure what you've already bought: certified engineers, business-aligned settings and a handoff with real knowledge transfer.

A PLATFORM ISN'T RUNNING UNTIL IT'S CONFIGURED.

WHY DIGITALERA

Vendor-agnostic

Configured against your environment from the start.

Certified engineers

A named engineer team that stays with the project.

Documented

Configuration documented and handed off.

Fixed quote

Priced by platform and scope.

WHAT YOU CAN EXPECT

- Platforms configured to your actual environment
- A staged cutover with no all-at-once risk
- Integration with your identity and monitoring stack
- A team able to run and troubleshoot it
- Documented configuration for future changes

WHAT YOU RECEIVE

- ✓ Configured platform
- ✓ Cutover plan
- ✓ Configuration documentation
- ✓ Knowledge-transfer sessions

How it's scoped

Fixed-scope or ongoing by project shape. The physical build is IT Infrastructure Deployment.

Right fit if you've bought an infrastructure platform and need it configured past defaults, or a cutover needs planning.

Something else first if the gap is physical (IT Infrastructure Deployment), you haven't chosen a platform (Network Assessment) or want it run (Managed Networking).
