

WEB APPLICATION PENETRATION TESTING

Real-world attack scenarios against your web applications and their logic.

Our web application penetration testing simulates real-world attack scenarios to uncover hidden vulnerabilities that cybercriminals could exploit. Built on proven methodologies, it delivers a prioritized roadmap for remediation.

THE CODE BEHIND THE BUSINESS, PUT TO THE TEST.

Injection and input validation

SQL injection, cross-site scripting, command injection and other critical vulnerabilities checked.

Access control and authorization

Broken access controls that could expose sensitive data or functions identified.

Authentication and sessions

Login flows, token misuse and session hijacking tested for flaws.

Business logic and components

Workflow abuse, third-party libraries, exposed endpoints and misconfigured components reviewed.

WHY DIGITALERA

Manual expertise

Every critical finding validated through expert-led manual testing.

Flexible approach

Production or staging, tailored to your needs.

Risk-aligned reporting

Findings prioritized by exploitability and business impact.

Developer-focused fixes

Findings mapped to your environment with practical guidance.

WHAT YOU CAN EXPECT

- A clear view of exploitable application risks
- A vulnerability list ranked by impact and exploitability
- Remediation guidance tailored to your dev stack
- Readiness for compliance or customer security reviews
- Reporting for executives and developers alike

WHAT YOU RECEIVE

- ✓ Full web application report
- ✓ Executive summary
- ✓ Remediation plan
- ✓ Debrief with consultants

How it's scoped

Project-based, scoped on a discovery call. Optional re-testing verifies fixes, with its own report.

Right fit if you ship or run web applications and need exploitable risks found before attackers or customers find them.

Something else first if your concern is API data flows (API Security Assessment) or continuous testing every sprint (PTaaS).
