

SECURITY AWARENESS TRAINING

Role-based training, plus phishing simulation to prove it worked.

Most cyberattacks still start with a click. Interactive, role-based training makes security real for every employee, and phishing simulation shows whether it changed behavior, delivered by practitioners who know what today's attacks look like.

YOUR EMPLOYEES ARE THE FIRST LINE OF DEFENSE.

WHY DIGITALERA

Role-based content

Modules tailored by industry, role and risk profile.

Working practitioners

Delivered by real cybersecurity professionals.

Bilingual delivery

English and Spanish, via LMS, live virtual or on-site.

Auditor-ready metrics

Training and phishing results in one evidence set.

WHAT YOU CAN EXPECT

- A measurable human-risk baseline
- Training that changes behavior, with proof
- Departments with the most human risk identified
- One evidence set for training and phishing metrics
- A workforce that reports threats faster

WHAT YOU RECEIVE

- ✓ Role-based training modules
- ✓ Phishing campaign results
- ✓ Completion and click metrics
- ✓ High-risk users and departments

How it's scoped

4 models: one-time rollout, subscription, one phishing campaign or quarterly program. Rollouts typically take 2 to 4 weeks.

Right fit if you need auditor-ready awareness evidence, or your current training is generic check-the-box content.

Something else first if you're testing your IR plan (Tabletop Exercise), need technical controls (Solutions) or haven't assessed risk yet (Skyrocket).
