CLOUD SECURITY

CNAPP, CSPM, workload and container security for AWS, Azure and multi-cloud.

The cloud gives you agility and scale, and a different attack surface: misconfigurations, exposed storage, over-permissioned identities, containers nobody is watching. We give you the visibility, control and compliance posture to use that agility safely.

CLOUD AGILITY, WITHOUT THE BLIND SPOTS.

Cloud posture management
Continuous misconfiguration and compliance-risk detection across Azure, AWS and multi-cloud estates.

Workload and container security
Protection from build to runtime, including Kubernetes and containerized environments.

Cloud identity and access risk
Find and fix over-permissioned roles and excess access before they become an attacker's path.

Full attack-path visibility
See how individual misconfigurations chain into an actual attack path, with CNAPP.

WHY DIGITALERA

Vendor-agnostic method
A documented 4-step method, so the shortlist fits your environment.

Deployed with tuning
Professional Services stays through the tuning period after go-live.

Cloud-native roster
A smaller roster by design: fewer, sharper platforms.

No lock-in
Exit at contract renewal, with no penalty for leaving.

HOW WE SELECT

1. **Assess**
Coverage gaps and ranked risk, before any product demo.

2. **Shortlist**
2 to 3 fits, scored on your environment and budget.

3. **Deploy and integrate**
Configure, integrate and tune, with support after go-live.

4. **Run it or hand it back**
Move into the matching managed service, or keep it in-house.
